

Sturgeon Science School

Dive into Great Lakes Science!

Sturgeon Science School is a unique experience that uses the local community to teach students about human impact on freshwater ecosystems. This program immerses 5th grade students in hands-on science inquiry and learning that support Next Generation Science Standards and STEM career exposure.

Student Benefits

- Collect, analyze and compare river water samples
- Problem-solve real environmental issues
- Gather data about native and invasive species
- Understand ecosystem and human connections
